# Project Access & Documentation Guidelines

---

## 1. Required Links & Access

### 1.1 Figma File

- Share your Figma file link with view access enabled (Share → Anyone with the link → can view).
- No email or invite is needed — a public “Anyone with the link” view link is sufficient.
- Include the link clearly in your submission document.

### 1.2 GitHub Repository

- Make the repository Public before submitting.
- Double-check there are no API keys, .env files, passwords, or other credentials committed before making it public.
- Include the repository link clearly in your submission document.

### 1.3 Jira Project Access

- This is the one item that needs direct access, not just a link.
- Go to Project Settings → People (or User access) → Add people, and add the following email as a Viewer:
  - chamathkara.k@sltc.ac.lk

### 1.4 Test Cases Update Document

- Share as a Google Doc/Sheet or Excel Online link with “Anyone with the link can view” access enabled.
- Include the link clearly in your submission document.

### 1.5 Functional & Non-Functional Requirements Document

- Share as a Google Doc or Excel Online link with “Anyone with the link can view” access enabled.
- Include the link clearly in your submission document.

### 1.6 Architecture Diagram

- Share your system/software architecture diagram with view access enabled (e.g. a Google Drive, Figma, or Miro link set to “Anyone with the link can view”).
- Include the link clearly in your submission document.

---

### 1.7 Other Resources

- If you have prepared any other resource not listed above (e.g. API documentation, design system, database schema diagram), enable link-sharing access for it as well.
- Clearly mention and label each additional resource in your submission document, with its link.

## 2. Submission Checklist

### 2.1 Before You Submit

- Figma file link — shared, view access enabled.
- GitHub repository link — set to Public, credentials removed.
- Jira project — chamathkara.k@sltc.ac.lk added as Viewer.
- Test Cases document link — shared, view access enabled.
- Functional & Non-Functional Requirements document link — shared, view access enabled.
- Architecture diagram link — shared, view access enabled.
- Any other resources — access enabled and clearly listed.
- All links compiled into a single submission document.
